Projects

Chat System Using Full Stack — Full Stack Development [\(Preview\)](#)

It is an online chat system that has various settings like updating profile picture, updating profile, chatting with strangers, chatting with friends, etc...

DIY Blog — Full Stack Development [\(Preview\)](#)

This project is a blogging system where we want to show the user how to do some DIY projects step by step and where users can upload any number of steps with images for individual step.

Resume Builder — React JS [\(Preview\)](#)

The project is based on taking the user details and creates the resume and downloads it in the form he wanted. In this website he can choose the color he wants.

Tony's Chat Bot — Python [\(Preview\)](#)

It's a chatbot variable usages; it is just trained to clear any type of questions by the client. It is first trained by the dataset learns through feedback incase of new cases. It has an attractive UI which makes it more appreciable.

Machine Learning Based Predictions — Python [\(Preview\)](#)

I've created various predictors that are very accurate in giving the predictions. The predictors I've worked on are Boston House Prediction, Wine Quality Prediction, Breast Cancer Prediction, and SONAR Mine Rock Prediction.

Recipe Blog System — Mern Stack [\(Preview\)](#)

This part of projects contain basic java projects like Bank App, Quiz App, Bill Generator using Java and OOPS concept. This project mainly concentrates on the working of the classes and performing various operations.

Many more Projects have been built and updated on [GITHUB](#)
